QUALITY

is the heart of V-CUBE Bearings.

High Performance and long durability of Bearings mainly depends on preciseness of its rolling elements which are ROLLERS and RACES (INNER & OUTER).

ROLLERS

Each bearing produced at V-CUBE is fitted with duly super finished rollers made from SAE 52100 Bearing grade steel only, since rollers are the most important rolling element in any bearing. Rollers are grinded and super finished to such close dimensional and geometrical tolerances that they are practically identical. This provides optimal load distribution, reduces noise and vibration and enables preload to be set more accurately in the bearing.

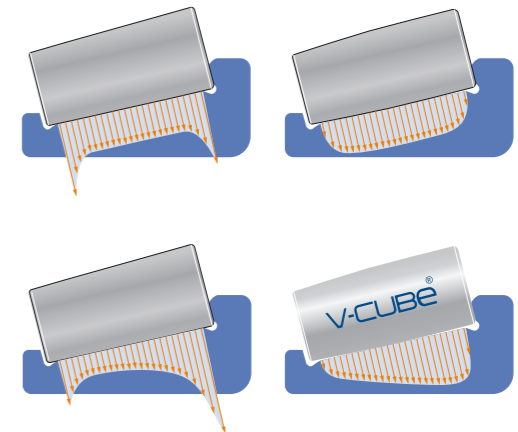

RACES (INNER & OUTER)

We, at V-CUBE Bearings, uses races that are manufactured from SAE 52100 Bearing grade steel which is valued for its mechanical strength, high hardness and excellent wear resistance for bearing parts. Tracks of both races including lip are grinded and super finished to closest dimensional and geometrical tolerances, since ring races must withstand the high loading imparted by the rolling elements and it also provides interchangeability.

LOAD DISTRIBUTION

Uniform load distribution due to optimized roller and raceway profile.

Accurate line contact between the rollers and raceways ensures optimum stress distribution at the contact points and prevents stress increases at the edges. As a result, the bearings can tolerate certain angular misalignments and give better support of moment loads.

Industries we serve:

- Machine Tools
- Steel
- Sugar
- Mining
- Thermal
- Chemical
- Petroleum
- Ceramic
- Agriculture
- Pharma
- Trucks & Trailers
- Newspaper Printing
- Plastic
- Infrastructure
- Defence & More.

V-CUBE

BEARINGS

About Us

We, V-CUBE BEARINGS, are High End Quality manufacturers of Industrial Bearings with over two & half decades of strong presence as a leader in bearings industry in roller manufacturing and over seven years of experience in bearings manufacturing. V-CUBE BEARINGS is renowned across its wide range of O.E. customer base for producing and supplying them with highest quality bearings again & again & again. Yes, V-CUBE BEARINGS has made this possible due to its undying, gritty and disciplined behavior focusing entirely on product quality and total customer satisfaction.

V-CUBE BEARINGS has state of the art production facilities for producing wide range of Industrial Bearings with closest tolerances possible. The plant is equipped with Europe based 3rd generation cnc machinery and in-processs controlling systems for achieving and maintaining highest level quality.

MISSION:

Repeatedly manufacture and deliver High End Quality Bearings to entire range of industries with undying, gritty and disciplined behavior to achieve total customer satisfaction.

VISION:

To make V-CUBE BEARINGS the most trusted 'Made in India' Brand for Industrial Bearings by 2030.

Quality

Quality is the heart of V-CUBE BEARINGS. Each produced bearing at our factory passes through rigorous manual and mechanical quality checking process before supplying to our valued customers. These checks are carried out on sophisticated Japanese make standard and metallurgical lab instruments. We follow ISO 9001:2015 quality standard across plant's production and packaging platform.
